

ABSTRACT

1           A cryogenic fluid storage/processing system which  
2     includes a cement box in which is positioned a  
3     multiplicity of tanks arranged parallel in one or more  
4     layers and surrounded by perlite insulation, and in which  
5     is positioned a pump for filling/emptying the tanks. A  
6     vaporizer the vaporizing the tank contents is mounted on  
7     or adjacent to the box.
